SUMMARY

Head of Intelligence at a hospital supply operation, a function I founded and where I own the portfolio of AI and automation initiatives: prioritization, requirement gathering with the business process owners, solution selection, and measured adoption after go-live.

My career started in strategy consulting and operations management, before technology. I was a project manager at EY and a procurement manager at the Rio 2016 Organizing Committee, which gave me the vocabulary to talk to the business and the practice of operating inside a matrix structure.

I work in the gap between the business rule and the implementation: I gather the requirement with the business area, model the data and write the system. Twelve applications in production, pilot or active development, in Python and TypeScript on PostgreSQL, Supabase and Google Cloud, with close attention to per-call LLM cost, multi-tenant isolation and keeping the final decision with a human wherever an error is expensive.

Fluent English, TOEIC 940. BSc in Business Administration and MBA in Strategic and Economic Project Management, both from FGV.

CORE COMPETENCIES

Applied Artificial Intelligence — use cases structured with the business process owner, RAG with citations traceable back to source, embeddings and vector search, multi-agent orchestration, human oversight at the decision point. Gemini, Claude, OpenAI, Ollama, Vertex AI.

Data Governance — master data standardization and quality, provenance and traceability, per-profile access management (Row Level Security), audit trail, business rule versioning, retention and LGPD.

Digital Transformation — portfolio prioritization, solution-agnostic requirement gathering, process automation (RPA and BPMS), change management, KPI definition and instrumentation, post-implementation adoption.

Enterprise platforms and integration — ERP (Odoo, SAP), CRM, Microsoft Teams / Outlook / Azure, Google Cloud and BigQuery, Supabase and PostgreSQL, API integration, multi-tenant architecture.

Supply chain and decision support — S&OP, demand planning, strategic sourcing, category management, discrete-event and Monte Carlo simulation, Power BI and Tableau.

PROFESSIONAL EXPERIENCE

Supply4Med — Head of Intelligence

Jul 2024 – Present

Hospital supply operation.

- Founded the Intelligence function and act as the entry point for the business areas' technology and AI demands: I turn the request into a structured requirement, name the process and data owner, and route it to the right delivery path.
- Led the definition and instrumentation of the company's strategic KPIs, aligning each metric to a business objective.
- Delivered the AI agent ecosystem integrating Google Gemini, Microsoft Teams, Outlook, Odoo ERP and scheduled WebJobs, letting business users query project, CRM and task data in natural language, inside the tool the team already works in.
- Implemented a retrieval-augmented (RAG) document intelligence platform for centralized internal document search, plus agents for automated market intelligence supporting commercial prospecting.
- Designed a data governance model based on an access hierarchy and per-profile tool sets.
- Delivered the item description standardization and purchase demand consolidation solution, raising catalog data quality to the point where reliable price comparison and consumption analysis became possible.
- *Previously Head of Operations and Control at the same company:* 66% reduction in process execution time through automation, with Power BI order management dashboards.

Advison Consulting — Specialist Advisor

Jun 2023 – Mar 2024

- **Grupo Boticário, LeadTime project:** analysis of operational data extracted from SAP and delivery of reports and dashboards driving end-to-end lead time reduction. GCP/BigQuery, SQL Server, Dataprep, Power BI, Tableau.
- **ScoreCredit:** predictive credit risk model for a pharmaceutical distributor, applying statistical and machine learning techniques to optimize limits and expand sales under controlled risk.

EzTools — Project Manager

May 2022 – Jun 2023

- Solutions architect and project manager for multiple RPA and BPMS implementations, designing and optimizing complex business processes for automation.
- Clients: **Eurofarma**, Atento, Sicoob.

What's on Tap? — Founder

Oct 2016 – May 2022

- Founded and ran a food industry startup, with full ownership of the business plan, cash flow, budgeting and supplier relationships.

Rio 2016 — Olympic Games Organizing Committee — Procurement Manager

Aug 2015 – Sep 2016

- Strategic sourcing and acquisition of high-volume categories: utilities, transportation for staff, athletes and spectators, and Olympic Village equipment.
- Served on the purchase approval committee, within a matrix structure spanning the International Olympic Committee, global sponsors, compliance and hundreds of suppliers.

EY — Project Manager

Oct 2012 – May 2015

- Restructured the procurement function of a Brazilian company operating in Venezuela through category management and strategic planning.
- Delivered strategic sourcing projects for consumer goods, chemicals and agribusiness clients.
- Established a PMO governing demand generation, procurement and logistics pre-projects for a large wholesaler.

Webb / BrainNet — Project Manager

Sep 2007 – Oct 2012

- Delivered logistics solutions for e-commerce and pharmaceutical clients, including a performance-based compensation model for logistics providers.
- Strategic sourcing across shopping malls, agricultural equipment, education and retail.
- Business plan for a German heavy equipment manufacturer entering the Brazilian market.

AI AND DATA INITIATIVES

Match Hub — hospital supply standardization and matching · in production

Multi-tenant platform that normalizes descriptions with an LLM, generates embeddings and finds equivalent items across catalogs that never spoke the same language. Ambiguous cases go to human curation rather than becoming a silent wrong match.

OmniTwin — digital twin for industrial operations resilience · personal project

Discrete-event simulation with stochastic failure by MTBF/MTTR, SKU changeover setup matrix and per-parameter stress testing, returning inventory levels, the flow's constraining node and the financial impact of unmet demand.

Supply Chain Pipeline Builder — visual analysis and forecasting builder · personal project

Fifteen ETL operations, inventory analysis (ABC/XYZ, safety stock, reorder point) and ARIMA/SARIMA forecasting, with Monte Carlo over 10,000+ iterations. Any pipeline exports as a runnable Python script or Jupyter notebook.

LexMind — legal copilot for public procurement under Law 14.133/2021 · under contract

Every statement carries a source identifier resolved in real time against a verified document. Hybrid vector and full-text search, with cross-firm isolation tested as code.

Tax-Hub — interstate pricing tax simulation · complete MVP

Tax rules moved out of the code: the tax analyst registers the formula, validates it against known cases and publishes without a deploy queue. Step-by-step calculation trace exportable as an audit document.

EDUCATION AND LANGUAGES

- **MBA, Strategic and Economic Project Management** — FGV, 2013
- **BSc, Business Administration** — FGV/EAESP, 2003
- Agile Project Management with Scrum, 2020 · LLM Applications using LangChain, 2024 · Data Science, 365 Careers, 2024
- Portuguese native · **English fluent (TOEIC 940)** · Spanish advanced
